WOODRIDGE, IL 60517  
Phone 630-985-6009  
Fax 630-985-4405

## MOMENTARY SWITCH

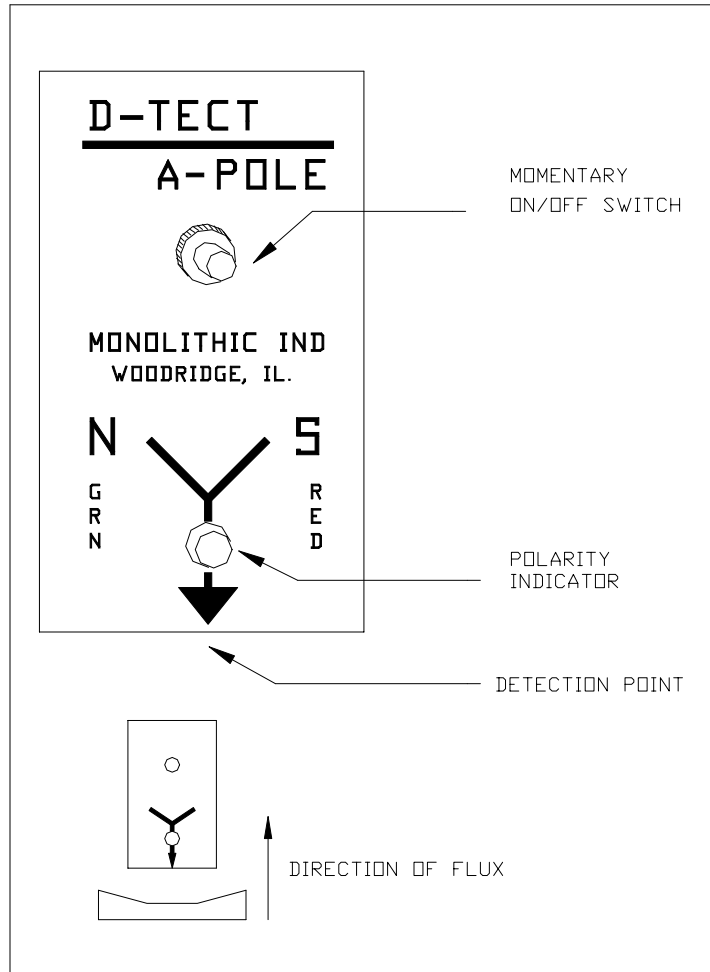

Press and hold for power on.  
The switch is off when released.

## POLARITY INDICATOR

This is a dual color LED indicator (red/green). The LED color indicates the magnetic polarity.

## DETECTION POINT

The tip of the arrow is the point where the magnetic field is detected.

Using the D-TECT A-POLE is quick and easy. Hold the unit so your thumb can press and hold the pushbutton. Orient the tip of the arrow parallel to the direction of flux of the unknown magnetic field as pictured above. (the unit will not detect any flux if the four rubber feet are laid flat on the pole piece). Place the end of the unit against an energized field pole or a permanent magnet, press in and hold the button, the unit will indicate the polarity

The D-TECT A-POLE acts exactly like a compass. With a compass the needle points to the North Pole of the earth. The D-TECT A-POLE as shipped from the factory lights green indicating a North Pole, the same as a compass. We have included red and green stickers that you may place over the **grn** and **red** legends should you desire the opposite indication of polarities (red sticker on **grn** legend and green sticker on **red** legend).
